Downs Link

Removal of diseased trees February 2021

Due to Ash dieback a number of the ash trees along the Downs Link are having to be felled. Ash dieback is a serious fungal disease which is affecting ash trees across Europe. Young trees can die quickly once infected. Older trees can be slowly killed by a cycle of infection.

Works to take place from 8th February 2021 for 3 weeks approx. These works will not be taking place the week commencing 15th February 2021 during the school holidays.

Sadly, we now have to remove the most severely affected trees for safety reasons and will only carry out work on trees if the trees show signs of decline.

Please take care as you walk on the Downs Link as contractors may be on site carrying out these essential works.

Please follow any instructions given and avoid areas of tree works that may be obstructed.

Thank you.
